

“app” folder contains the app.py file.

db_scripts contains all the stored procedures and the tables creation.

Testscript is for running the test and contains all the tests.

Api.yaml is the documentation for the project.

How to run the server:

Go to the app folder

run ./app.py

to sign in: run signInClient

How to run the test:

run ./testscript and enter values according to the prompts

The expected_testscript_output.txt is within the same folder as the testscript and is the expected output.
